

CS471 – HW #2

For this assignment, you will implement your design from HW1 in either Java or C++. You will come up with your own file formats and you may assume that the files are properly formatted before they are passed into your system.

In addition to the functionality in HW1, your system must provide a separate file called `<testName>Key.txt` for each exam generated containing the answer key to the test. The key will contain a numbered list where the number corresponds to that number question on the test and next to that number is the answer to the question.

ie:

1. Blueberries
2. F
3. A
4. Red coats
5. Banana
6. Banana
7. Banana
8. Orange you glad I didn't say banana
9. B
10. A
11. C
12. F
13. T

TURN IN:

Your code, be sure it follows the style guide.

Any input files I might need.

A UML document describing your system.
